PLEASE RETAIN THESE ASSEMBLY INSTRUCTIONS FOR FUTURE REFERENCE

If you have any queries concerning the duration and terms of the guarantee, please contact your supplier. We would also refer you to our General Sale and Supply Conditions, which are available on request.

The manufacturer accepts no liability for any damage or injury caused by failure to follow these instructions, or from negligent operation or assembly, even if this is not expressly stated in this instruction manual.

In light of our policy of continuous improvement, it is possible that details of the product may differ from those described in this manual. For this reason, these instructions should only be treated as guidelines for the installation of the relevant product. This manual has been compiled with all due care, but the manufacturer cannot be held responsible for any errors or the consequences thereof. All rights are reserved and no part of this manual may be reproduced in any way.

1. **Introduction**

This manual describes the assembly of the RCS PLUS. Read this manual carefully. The installer must be informed of the contents of this manual. Follow the contents of the manual precisely. Always do things in the correct order. This manual should be kept in a dry and safe place. In case of damage or loss the user may request a new copy of the manual from RAVAS.

2. **Warnings & safety measures**

When installing the RCS PLUS, please observe carefully the instructions and guidelines contained in this manual. Always perform each step in sequence. If any of the instructions are not clear, please contact RAVAS.

The installation of the RCS PLUS should only be performed by an acknowledged electro and hydraulic technical installer. Possible failures to the equipment must be communicated to your installer. The equipment should be checked annually by your installer.

Should you have any further questions after reading this manual please contact us at:

**RAVAS EUROPE B.V.**
Toepadweg 7
Postbus 2023
5300 CA Zaltbommel
Nederland

Email: info@ravas.com
3. **Overview of components**

The RCS PLUS weighing system consists of two main components:

1. Indicator
2. Hydraulic block

The hydraulic block has been connected on the hydraulic system of the forklift truck. The indicator, the control panel of the system for the driver, operates on 12 Volt DC supply connected on the battery of the truck. The illustration below shows the components in the circuit.

It is advised that the installation of the hydraulic block in the hydraulic system of the forklift truck is carried out by your official forklift dealer.

**Type A: 1 center cylinder**
Type B: 2 side cylinders

* Not needed when the indicator is supplied with an integrated 3A power converter or regulator. If so, the label “CONVERTER INSIDE” or “REGULATOR INSIDE” must be stuck onto the indicator and power cable.

If needed, they parts 19 and 20 can be ordered additionally at RAVAS (recommended).
5. **Before the installation**

Before you start with the installation, check the forklift truck on the following points:

5.1 **Capacity of the forklift truck**

The RCS PLUS can be installed on forklift trucks with a capacity of maximum 99 ton.

5.2 **Maximum pressure in the hydraulic system**

The RCS PLUS will operate optimally at an oil pressure up to 350 bar.

5.3 **Battery voltage of the forklift truck**

The most common voltages for forklift trucks are 12, 24, 48 and 80 VDC. The RCS PLUS operates on 12 VDC. In cases where the battery voltage is greater than 12 VDC, the system requires a DC-DC power converter with an output voltage of 12 VDC.

5.4 **Making the system pressure free**

Before installation of the RCS PLUS, the hydraulic system of the forklift truck must be pressure free. There are two ways to do this:

Option 1: Place the forks on the ground in their lowest position and make the hydraulic system pressure free, by tilting the mast forwards. Be sure the chain is slack!

Option 2: Lift the forks and position them on top of a supporting surface. Make the hydraulic system pressure free, by lowering the lifting cylinder into its lowest position. Be sure the chain is slack!
5.5 The condition of mechanical components of the forklift truck

After installation of the RCS PLUS system on the forklift truck, the truck is part of the weighing system. In particular the mechanical parts of the forklift truck, such as the mast, mast roles and bearings, will influence the accuracy of the weightings. For this reason it is important that these components are in good condition:

- no local wear in the mast of the forklift truck
- clean the system
- good lubrication of the mast and chains
- regular maintenance so that the condition of the system is constant
- when lifting and decreasing the forks no whistling and cracking sounds from the mast
6. Installation

6.1 Connecting the threaded joints to the hydraulic block *(USA only)*

6.2 Installing the hydraulic block
6.3 Installing the T-piece

Type A: 1 centre cylinder

Mount a T-piece in the pressure line of the truck, close to the cylinder, to make the split point for the RCS plus

Type B: 2 side cylinders

Mount a T-piece in the pressure line of the truck, close to both cylinders, to make the split point for the RCS plus
6.4 Short hydraulic line from the T-piece to the inlet of the hydraulic block
6.5 Hydraulic line from the outlet of the hydraulic block to the return line of the truck

B. Connect with the existing main return line, after the oil filter (if installed)

A. Connect directly to the oil reservoir

Do not place an oil filter in the return line of the RCS PLUS!
6.6 Position of the indicator

1. The indicator should be easy to reach and read out!

6.7 Installing the indicator

1.

2.
6.8 Connecting the sensor cable

1. Connect the sensor cable to the sensor.
2. Secure the cable with a cable tie.
6.9 Connecting the cables for the electric valve and sensor

If needed, install a net filter *

If needed, install a DC-DC power converter: Output 12VDC, 3A *

* Not needed when the indicator is supplied with an integrated 3A power converter or regulator. If so, the label “CONVERTER INSIDE” or “REGULATOR INSIDE” must be sticked onto the indicator and power cable.

6.10 Connecting the power supply cable

Arrange power supply from the truck

If needed, install a net filter *
6.11 Connecting the system wires *(see electrical diagram)*
6.12 Removing possible air out of the hydraulic system

Lift the fork to maximum height for two times to remove all possible air out of the hydraulic system.

6.13 Adjusting the position of the flow adjustment valve

1. Remove the protection cap of the flow adjustment valve

2. Unlock the counter-nut of the flow adjustment valve
6.14 Checking if the system functions correctly

1. Start up the indicator
   Press the on/off key.

2. Activate a test weighing by pressing the (Σ) key

3. The forks should go down.

4. < 0.5 sec

5. The forks should go down.

6. The forks should go down.
If not, open the flow adjustment valve by turning the adjustment nipple counter-clockwise.
7. Calibration

7.1 Tuning the lowering speed of the forks

1. Start up the indicator
   Press the on/off key

2. Lift the empty forks up to the reference height

3. The forks should go down with a constant speed. The downwards movement should be in between 6–8 inch or 15–20cm. Also check it with loaded forks.
   If needed, adjust the position of the flow adjustment valve (steps 7-10)
Remove the protection cap of the flow adjustment valve

Unlock the counter-nut of the flow adjustment valve

When OK, lock the counter-nut of the flow adjustment valve and mount the protection cap

Marking the reference height

1. Measure 32" (80 cm) from the ground.
2. Mark the reference height at 90°.
7.3 Preparing for calibration

Calibration weight M1: +/- 2/3 of the truck’s lifting capacity

EXAMPLE #1: 2.2t truck => M1 = 1500

- OK
- X
- X
- X

Temperature limits:
- min -10°C 15°F
- max 40°C 105°F
7.4 Working temperature of the forklift truck

1. 90° M1
2. < 0.5 sec
3. Repeat this cycle for 2 minutes
### 7.5 Zero calibration

1. Start up the indicator
   - Press the on/off key

2. The display should show “0 – AdJ”

3. If “TARE” is shown press the on/off key once (escape)

4. Lift the empty forks up to the reference height

5. < 0.5 sec

---

- RCS PLUS
- INSTALLATION MANUAL
7.6 Span calibration

1. 12 sec

2. 1 x
   Change “0000” into the value for M1
   EXAMPLE #1: M1 = 1500

3. 1 x

4. 5 x

5. 1 x

6. 1 x
Press the on/off key twice to restart the indicator.
8. Parameter settings

8.1 Entering the parameter menu

1. 30 sec
2.
8.2 Changing the parameters

1

2

3

4

5

6

Changing the parameters

- **TRUCK CAPACITY**
  - 100 - 2500
  - 2600 - 5000
  - 5100 - 10000

- **GRADUATION STEP**
  - 2
  - 5
  - 10

Example #2:
If the truck capacity is 5000, change the value for P_02 into 5.
P_05 is the Weighing capacity system
EXAMPLE #2: If the truck capacity is 5000, change the value for \( P_{05} \) into 5000.
8.3 Leaving the parameter menu and saving changes

1. [Diagram showing parameter menu]

2. [Diagram showing idle state]

2 sec.

9. Attachments

9.1 Connecting the system wires and printer wires

If the RCS PLUS is equipped with a printer, connect the wires of the power supply and the printer with indicator board as shown in the wiring drawing below.
