HPT Hand pallet truck

Impressive all-rounder for loads weighing up to 3000 kg

Maximum steering lock for manoeuvrability in the tightest of spaces

Ergonomic handle design for fatigue-free operation

HPT 25, HPT 30, HPT 20 FL

Hand pallet trucks are versatile, easy to operate and ready at all times, making them one of the most popular types of industrial truck used in logistics. Featuring lifting capacities of up to 2500 kg and 3000 kg respectively, the reliable HPT 25/30 models boast an impressively functional design and are incredibly straightforward to use. The various fork lengths and widths offered by the HPT mean it can be configured optimally for almost any carrier and even for transportation of two pallets laid end to end. The ergonomic design of the tiller enables fatigue-free operation, guaranteeing outstanding levels of productivity, whilst the maximum steering lock of 205° provides extremely high

manoeuvrability – even in the tightest of spaces. The option of the quick lifting function for loads of up to 150 kg makes the HPT 25 your ideal partner for swiftly loading and unloading lorries, moving pallets, and covering short transport routes. The HPT 20 FL flat pallet truck has a lifting capacity of 2000 kg. With a fork height of just 56.5 mm, it is best suited to lifting really low carriers, such as special pallets or packages. The tips of the forks taper towards the front, so they can be used as a skid lift, thereby making it easier to pick up pallets from the side.

HPT Hand pallet truck Simply moving more

High flexibility in use

Mobile workbench – whenever and wherever

Excellent stability, even at the maximum lift height

HPT 10 XM

With a lifting capacity of 1000 kg, the HPT 10 XM manual scissor lift truck combines the advantages of a low lift pallet truck with those of a mobile workbench. The scissor lift for heights of up to 800 mm allows for loading and unloading, order picking and assembly work to

be completed without having to strain to bend or lift, which is better for workers' backs. For a lift height of 400 mm or more, supports are placed on the floor to provide the equipment with stability, making the HPT 10 XM a practical and extremely safe partner.

Ergonomic operation in all situations

Lifting and lowering of loads with ease at the touch of a button

Powerful 1.6 kW lifting motor for loads of up to 1000 kg as standard

HPT 10 XE

The HPT 10 XE allows for ergonomically optimised operation in all situations thanks to its easy-to-use electrical scissor lift function. The standard 1.6 kW lifting motor, complete with powerful 12 V/60 Ah battery, makes it possible to lift loads weighing up to 1000 kg with ease. The working height of up to 800 mm is freely adjustable by

electrically operating the scissor lift, reducing the strain on workers' backs, and the built-in supports can be used from heights of 400 mm, meaning that maximum safety is guaranteed with the HPT 10 XE as standard.

HPT/HPS Hand pallet truck

Simply moving more

Compliance with the most stringent hygiene standards

Quick and straightforward cleaning thanks to dirt-repellent properties

Long-lasting protection against moisture thanks to the corrosion-resistant pump mechanism

HPT 25 GA

The HPT 25 GA is a galvanised version that has been developed for use in damp or cool operating conditions. The surface coating provides the hand pallet truck with particularly effective protection against corrosion and wear, making it ideal for use outdoors, e.g. in horticultural enterprises, covered markets or ports.

HPT 25 ST

The HPT 25 ST is made from acid-resistant stainless steel (AISI 304) and complies with all hygiene regulations from the pharmaceutical, food and chemical industries. Its electropolished surfaces are dirt-repellent, making the product easy to clean. Made from durable bronze, the pump mechanism provides effective protection against corrosion, whilst the roller bearings are fully encapsulated to keep them waterproof.

HPS Hand pallet truck

Transportation and accurate weighing of goods

Splash-proof LCD display unit suitable for use indoors and outdoors

Display and weighing unit that can be flexibly configured

HPS 20 W/25 W

Weighing, checking and calculating – the HPS 20 W and HPS 25 W variants can be used to transport loads of up to 2000 kg and 2500 kg respectively, whilst an accurate weight measurement can be taken in the same process step. Weighing cells built into the forks guarantee precise measurement results, with a tolerance of just 0.1% of the lifted load. The weighing unit is intuitive and easy to operate, providing supporting functions, such as stored total sum function with consecutive numbering, the option to manually pre-set tare values and taring at the press of a button. The weighing unit has been awarded protection class IP 65 due to its protection against dust and moisture. There is also a battery indicator to show the current level of charge. The optional foot brake provides for an even higher level of safety on ramps, whilst the built-in printer – another optional feature – allows this single product to take care of yet another process step.

The HPS 20 W can weigh loads of up to 2000 kg, mainly being put to use in dispatch or goods inwards areas to determine transport weights in order to check for overloading or to run estimated checks of incoming goods. The scales come with an LCD display showing weights in 1 kg steps, and the weighing equipment is powered by four 1.5 V AA batteries.

The HPS 25 W features a multi-range display as standard for weighing goods. For loads of up to 200 kg, the weight is displayed in 0.2 kg steps, which allows for accurate measurements to be taken. The product is also almost always ready for use, as the battery module is easy to replace.

In industrial use, the HPS 25 W is suitable for loads of up to 2500 kg, e.g. for checking weights in production and when measuring consumable materials or filling containers. Additional functions for counting parts by inputting or calculating the part weight, a date/time function and a calibrated version are also available as options.

HPS/HPT Hand pallet trucks

Simply moving more

High manoeuvrability due to large steering angle

Easy crossways loading of pallets thanks to loading rollers under the tips of the forks

Ergonomically optimised tiller shape for fatigue-free operation

HPS and HPT

With lifting capacities of between 1000 kg and 3000 kg, the HPS and HPT hand pallet trucks are incredibly versatile with applications for production, retail, logistics service providers and workshops, where they can be relied upon to manoeuvre in the tightest of spaces, transport goods or load and unload lorries. These products feature a robust steel construction that has been designed with durability in mind, boasting torsional rigidity and proving ideal for even the most heavy-duty of applications. Their compact design, various fork sizes and

load capacities allow these hand lift trucks to be adapted to suit the particular application in question perfectly. The HPS 25 and its standard quick lifting function make it possible for loads of up to 200 kg to be lifted with even more speed, resulting in better handling performance. Thanks to the extensive range of tyre options available, the rollers can be adapted to the ground conditions to ensure optimum rolling performance.

Extensive Equipment

Power

- Effective goods handling with the capacity to transport goods weighing up to 3000 kg
- Torsionally rigid steel construction guaranteeing durability and reliability for demanding applications
- Low wear thanks to powder-coated surfaces
- Powerful motion with the manual or electrical scissor lift function making it possible to lift loads of up to 1000 kg to a height of up to 800 mm
- Even better handling performance for loads of up to 200 kg with the HPS 25's quick lifting function as standard

Precision

- Easier and quicker crossways loading of pallets thanks to the loading and unloading guides
- Precision even in the tightest of spaces due to the tiller's large steering angle
- Safe handling of delicate goods with high-precision lowering of the forks
- Fuel savings thanks to suitable tyre options that guarantee optimal grip and minimum rolling resistance in all situations
- Option to expand the weighing system and combine process steps into one for increased efficiency

Ergonomics

- Optimised tiller handle shape and functionality for guaranteed fatigue-free operation
- Ergonomic operation with lift heights of up to 800 mm
- Effortless – electrical lifting and lowering of loads, meaning physical strain is kept to a minimum

Compactness

- Various fork lengths and widths available to ensure you have the right equipment for every requirement
- Exceptional manoeuvrability even in the tightest of spaces due to the tiller's large steering angle

Safety

- Optional operating and parking brake ensures safety even on ramps
- Improved safety thanks to supports that can be used for lift heights of 400 mm or more
- Hydraulic overload protection to prevent errors and guarantee correct usage
- Splash-proof display unit for scales for use outdoors

Environmental Responsibility

- Over 95% of all materials used are recyclable

HPS/HPT Hand pallet trucks

Detailed Photos

Easy crossways loading of pallets thanks to the tandem roller with loading guide

Versatile and extendable – accurate weighing equipment for a wide range of operational requirements

Low steering forces and rolling resistance thanks to the single nylon roller

Option to lift extremely low special pallets with the HPT 20 FL's flat forks
