

Színtárcsás tesztkészletek

A színtárcsák használatakor szemrevételezéses módszerrel (színpárosítás) határozható meg a koncentráció. Egyszerűen adjon hozzá reagenseket a mintához, és forgassa el a tárcsát, amíg a minta színe meg nem egyezik a referenciaszínnel – a koncentráció egy ablakban jelenik meg.

A Hach színtárcsa-tesztkészletek a készüléket, a reagenseket és az utasításokat tartalmazzák, mindezt egy ellenálló hordtáskába csomagolva. Többek között az alábbi paraméterek állnak rendelkezésre: klór, pH, vas, szilika, nitrogén stb.
