

Time-Resolved

Features and Benefits

- **USB 2.0 connection**
Simple Plug & Play connection
- **Multi-MHz Readout speeds**
Rapid image capture for fast transition phenomena analysis and “focusing mode”
- **Integrated Digital Delay Generator**
With comprehensive software controls
- **Close-Coupled Gating**
< 2 ns true optical gating speeds - ultimate temporal resolution
- **Lowest insertion delay**
As low as 19 ns
- **Fibre-optic coupling**
High optical throughput without vignetting
- **IntelliGate™**
MCP gating for On/Off ratios >10⁸ in the UV
- **Photocathode gating rate up to 500 kHz**
Increased Signal to Noise ratio for high speed laser-based experiments
- **Cropped sensor mode**
Specialized acquisition mode to achieve fastest image acquisition rate
- **High resolution Gen 2 and 3 intensifiers**
Highest available intensifier resolution with up to QE 50% and sensitivity options from 120 nm to 1,100 nm
- **Thermo-Electric cooling down to -40°C**
Ideal for low-light applications
- **Real-time control**
Intuitive Windows user interface for real-time acquisition optimisation
- **Photocathode dry gas purge port**
Provides further EBI reduction for low-light applications

Highest performance platform for fast gated, high resolution Spectroscopy

Andor's iStar 340T intensified CCD camera series is designed to offer the ultimate integrated detection solution for high resolution, ns-scale time-resolved Spectroscopy. The high resolution 2048 x 512 array with 13.5 µm pixel size offers a 4:1 aspect ratio which is ideally suited for use with Andor's Shamrock Czerny-Turner spectrograph series and accessories.

It boasts Multi-MHz readout along with laptop-friendly, USB 2.0 connectivity and a fully integrated, software-controlled Digital Delay Generator (DDG™). This allows seamless integration of complex experiments at the touch of a button, with full timing and gain control through a single interactive interface. Gen 2 & 3 image intensifiers with entrance input window and phosphor options are available to match wavelength range requirements from 120 nm to 1,100 nm and minimum gating speeds requirements < 2 ns.

Specifications Summary

	Ø18 mm	Ø 25 mm
Effective active area of CCD	18 x 6.9 mm	25 x 6.9 mm
Active pixels	1330 x 512	1850 x 512
Fibre optic taper magnification	1:1	
Effective CCD pixel size	13.5 x 13.5 µm (100% fill factor)	
Read noise	As low as 5 e ⁻	
Spectral rate (spectra/sec, max.)	Up to 1,100	
Useful photocathode spectral range	120 - 1100 nm*	
Photocathode QE	Up to 50%*	Up to 45%*
Minimum optical gate width	< 2 ns*	
Digitization	16 bit	

* Dependant on intensifier type

Specifications - Gen 2 Image Intensifiers •¹

Photocathode model	18*-03	18*-04	18*-05 †	18H-13	18H-83	18*-E3	25*-03

Internal Digital Delay Generator (DDG™) Key Functions

Gate pulse delay & width	- Adjustable from 0 ns to 10 s in 10 ps steps - Software controlled, pre-programmed or real-time
Trigger Outputs	
Output A, B and C	3x output, +5V CMOS level with 50 Ω source impedance; can drive 5V into a non-terminating load or 2.5V into 50 Ω load; output synchronized triggers for auxiliary equipment, e.g. lasers, flash lamps, National Instrument™ hardware - Individual delays control from 0 ns to 10 s in 10 ps steps - Configurable Polarity - Software controlled, pre-programmed or real-time
Fire	5V CMOS level reference signal for beginning and end of individual CCD exposure
Arm monitor	5V CMOS level reference signal to indicate when system is ready to accept external triggers. Signal goes high when system is ready to accept external triggers (after a readout has finished) and goes low when the exposure is finished
Gate & output A, B and C jitter	35 ps rms (relative to external trigger signal)
Trigger Inputs	
External trigger	- Trigger input for CCD and Digital Delay Generator - Up to 500 kHz for Integrate-On-Chip mode - Software-configurable Polarity, Termination and Trigger Threshold - Fast external software option for most rapid camera response to external trigger (CCD keep clean interruption) – no need for pre-trigger pulse
Direct gate	TTL input for exact external control of photocathode width and timing with smallest insertion delay.
Additional Controls	
Gate monitoring	AC coupling from photocathode to monitor exact photocathode on/off switching and timings
Insertion delay	< 19 ns in direct gate operation

Have you found what you are looking for?

Need greater spectral rate? The DH334T series cameras offers up to 3,450 spectrum per second.

Need faster response phosphor for Fast Kinetics? P46 phosphor is available as an option for all models.

Need taller sensor format? The high resolution DH334T series cameras offer 13.3 mm high field of view.

Need a customized version? Please contact us to discuss our Customer Special Request (CSR) options.

Creating The Optimum Product for You

How to customize the New iStar DH340T:

Step 1.

Select the diameter of intensifier required.

Step 2.

Select the minimum gating speed option that best suits your needs. For the available combinations please refer to the image intensifier tables on pages 2 and 3.

Step 3.

Select the image intensifier type that best suits your needs.

Step 4.

Please indicate which software you require.

Step 5.

For compatibility, please indicate which accessories are required.

Step 1.

Choose intensifier diameter
 18: Ø 18 mm
 25: Ø 25 mm

Step 2.

Choose minimum gating speed
 H: High QE, slow gating
 F: Fast gating
 U: Ultra fast gating

Step 3.

Choose image intensifier option (Gen 2):

03: W-AGT photocathode, P43 phosphor
 04: W-AGT photocathode, P46 phosphor
 05: W-AGT photocathode, MgF₂ window, P43 phosphor
 13: WR photocathode, P43 phosphor
 83: UW photocathode, P43 phosphor
 E3: WE-AGT photocathode, P43 phosphor

Choose image intensifier option (Gen 3):

63: HVS photocathode, P43 phosphor
 73: VIH photocathode, P43 phosphor
 93: NIR photocathode, P43 phosphor
 A3: EVS photocathode, P43 phosphor
 C3: BGT photocathode, P43 phosphor

Step 4.

The New iStar ICCD also requires at least one of the following software options:

Solis for Time-Resolved A 32-bit application compatible with 32 and 64-bit Windows (XP, Vista and 7) offering rich functionality for data acquisition and processing. AndorBasic provides macro language control of data acquisition, processing, display and export.

Andor SDK A software development kit that allows you to control the Andor range of cameras from your own application. Available as 32 and 64-bit libraries for Windows (XP, Vista and 7) and Linux. Compatible with C/C++, C#, Delphi, VB6, VB.NET, LabVIEW and Matlab.

Step 5.

The following accessories are available:

LM-C C-mount lens adaptor

LM-NIKON-F F-mount lens adaptor

ACC-XW-CHIL-160 Oasis 160 Ultra compact chiller unit

ACC-6MM-TUBING-2xxxxM 6 mm tubing option for ACC-XW-CHIL-160

ELC-05323 i²c to BNC cable for Shamrock shutter control

In addition to the accessories listed the following special options are also available:

90° USB connection

UV or visible lenses or adapter extension tubes

Please contact your local Sales representative for details of how to order any of these items.

Spectrograph Compatibility

The iStar series is fully compatible with Andor's Shamrock spectrograph (163 - 750 mm focal lengths) family. Spectrograph mounting flanges and software control are available for a wide variety of 3rd party spectrographs including, McPherson, JY/Horiba, PI/Acton, Chromex/Bruker, Oriel/Newport, Photon Design, Dongwoo, Bentham, Solar TII and others.

Product Drawings

Dimensions in mm [inches]

Weight: 4.2 kg [9 lb 4 oz]

■ = position of pixel 1,1

Connecting to the iStar

Camera Control

Connector type: USB 2.0

Logic Input / Output

Connector type: SMA, provided with SMA - BNC cable

5x outputs: FIRE pulse, Output A, B, C from DDG™ and ARM

 2x inputs: Camera trigger from 3rd party source & direct gate for complete, direct external control of intensifier gating

I²C connector

Compatible with Fischer SC102A054-130, pin-outs as follow:

 1 = Shutter (5V CMOS level with 50 Ω impedance), 2 = I²C Clock (5V), 3 = I²C Data (5V), 4 = +5 Vdc, 5 = Ground

Gate Monitor

1x output: AC coupling to photocathode

Mounting hole locations

Applications Guide

	Gen 2	Gen 2 UV Enhanced (-05, -83, -E3)	Gen 3*	InGaAs
Plasma Studies	✓	✓	✓	✓
Time Resolved Raman	✓	✓	✓	
Time Resolved Luminescence Spectroscopy	✓	✓	✓	
Laser Induced Breakdown Spectroscopy (LIBS)	✓	✓	✓	
Laser Flash Photolysis	✓	✓	✓	
Transient Absorption Spectroscopy	✓	✓	✓	✓
Time Resolved Photoluminescence Spectroscopy			✓	✓

* Gen 3 typically do not exhibit any UV response - Andor -C3 is constructed with an additional input phosphor interface to provide this UV response.

✓ = Suitable

Items shipped with your camera

Power Brick, 12V, 120W single line
 2x 2m BNC to SMA cable
 1x Gate Monitor cable
 3 Metre USB cable A to B type, shielded (1 off)
 1x Quick launch guide
 1x CD containing Andor user guides
 1x Individual system performance booklet

Regulatory Compliance

Compliant with the requirements of the EU EMC and LV Directives through testing to EN 61326-1 and EN 61010-1.
 External power supply PSE-approved

Footnotes: Specifications are subject to change without notice

- Figures are typical unless otherwise stated.
- Typical photocathode Quantum Efficiency and standard quartz input window transmission as measured by the tube manufacturer. MgF_2 window allows extended operation down to 120 nm.
- Typical resolution of the image intensifier tube only, not the overall resolution of the system. As a rough guide, the smallest resolvable FWHM feature will be approximately 2x the CCD pixel size. This is a very important consideration for optical resolution calculations in spectrograph-based systems.
- Gen 2 High QE (H) option – Photocathode QE is inherently linked to the gating speed of the intensifier. High QE option (H) offers higher peak QE than Ultrafast (U) or Fast (F) intensifiers, while exhibiting minimum gating speed one order of magnitude slower.
- Actual measured minimum optical gating of the photocathode, reflecting not only the electrical pulse width applied to the photocathode but also its inherent iris time.
- Gain is software-selectable through a 12-bit DAC and varies exponentially with DAC setting. Value refers to the ratio of max to min intensifier gain as measured for individual cameras. Actual optical gain (counts/photon) for a DAC setting is accessed by the multiplication of the relative gain (at that DAC value) by the minimum system gain (at DAC = 0, $CCD e^-/photon$) and divided by the sensitivity ($CCD e^-/count$) at a given CCD PAG. Sensitivities are individually measured and reported for each system.
- Combination of -73 GaAsP photocathode with a lumogen-coated fibre-optic plate and protective MgF_2 window. The latter additional optical interfaces are the reason for the lowered QE in the visible NIR region, for the -C3 model.
- Measured for the entire system. Combination of CCD readout noise and A/D noise - measurement is for single pixel readout with -30°C CCD cooling and at minimum exposure time under dark conditions. Values quoted are measured with highest available PAG setting.
- Linearity is measured from a plot of counts vs exposure time under constant photon flux up to the saturation point of the system.

Minimum Computer Requirements:

- 3.0 GHz single core or 2.4 GHz multi core processor
- 2 GB RAM
- 100 MB free hard disc to install software (at least 1 GB recommended for data spooling)
- USB 2.0 High Speed Host Controller capable of sustained rate of 40 MB/s
- Windows (XP, Vista and 7) or Linux

Operating & Storage Conditions

Operating Temperature 0°C to 40°C ambient
 Relative Humidity < 70% (non-condensing)
 Storage Temperature -20°C to 55°C

Power Requirements

110 - 240 VAC, 50 - 60 Hz
