

MODEL	ONYX
Drives	Servo AC
Cutting width	2000-7000 mm
Basic working length	Any length from 1500 mm
Positioning speed	25000 mm/min
Cutting thickness	up to 300 mm
Cutting quality	EN ISO 9013
Positioning accuracy	EN 28206
Safety standard	EN 13850

ADDITIONAL EQUIPMENT

 Gantry extension	 ESR System	 Filtroventilation	 Ventilation
 Plasma marking	 Drilling	 Punch marking	 Inkjet
 Heat shields	 Light barriers	 Compressor	 Air Booster
 Remote controller	 Suction table	 Automatic pallet table	 Water table
 Vortex 3D head	 Autocalibration for Vortex 3D head	 Autopositioning sheet for Vortex 3D head	

SOFTWARE

And many more...

ONYX

The modern construction and innovative technology solutions.
Unique work ergonomics and the attractive design.

OXYGEN
PLASMA

ONYX

1
VORTEX 3D FL HEAD

The fully automated plasma cutting head enables very precise bevelling and chamfering in a single sheet cutting process. Angle of rotation +/- 540° and head angle deflection +/- 47°, makes our cutting machine a universal tool able to work in three dimensions together with preparing welding phases on Y, V and K. Vortex 3D cutting head is equipped with sensors: anti-collision, electrical/mechanical touch and height sensor. This allows using technologies such as: Contour Cut®, Contour Cut Speed®, Diameter Pro® and True Hole®.

2
OXYGEN TORCH

Oxygen torch is the cutting solution destined to cut structural low-carbon and low-alloy steel. It is capable of processing wide range of material thickness. The torch was fitted out the height sensor, automatic ignition and possibility of manual angle setting.

3
SUCTION TABLE

Modular section tables grant efficient elimination of dust during the cutting process. The cutting machine was implemented with the self-supporting construction as the base for the frame with replaceable grids. Such construction offers safe and the best possible safety and performance of the table. The cutting table is provided with intelligent system of dust discharge from the cutting area. Each segment consists of supporting structure with discharge channels, diagonal grid, scrap tank and pneumatic controlled channels.

4
I-VISION CONTROLLER

The most modern i-Vision Controller is the high quality industry machine has Corning® Gorilla® Glass's touchscreen. Efficient parts and the strong construction ensures reliability Onyx working. Many functions of own software and simple controller's interface let to use all of machine's possibilities. Controller's place on the moving arm delivers the unique comfort and safety of machines operator. It make also possible to watching the cutting process and controller's using at the same moment.

5
CONSTRUCTION

The Onyx construction is made of closed profiles with large cross-sections. Integration of cabling and controlling elements inside the machine ensures more agility and less risk for destroying because of high temperature or other factors during the cutting. The size of guiding trolleys, specially prepared roadway and using double linear guides efficiently make the machine stable and deliver the best safety and accuracy.

CHARACTERISTICS

During designing of the plasma-oxygen cutter Onyx there were used some modern solutions of construction and mechanics. They ensured the best efficiency and the attractive, innovating look.

Modified bridge construction makes it more rigid and resistant for high temperature. It is very important, especially during even 300 mm thick materials cutting.

The unique combination of safety systems used in plasma-oxygen cutter Onyx ensure the highest comfort and the best level of safety for machine operators and people around them.

MAIN FEATURES

- ▶ Plasma Vortex 3D FL head ensure the best precision of automatic 3D cutting of plates, tubes and profiles
- ▶ More bridge rigid make possible to cut 1-300 mm thickness plates
- ▶ Modern i-Vision controller installed on moving arm delivers the unique ergonomic and comfortable work
- ▶ Modified drive system ensures clear X axle positioning during dynamic cutting
- ▶ Power LED lighting and light curtains warrants safe work
- ▶ Perfect scores thanks of greater base of predefined plasma and oxygen cutting parameters
- ▶ Integrated modules inside of the machine make better resistance for adverse influences from cutting process
- ▶ Machine with Kjellberg® Contour Cut™ technology and Hypertherm® True Hole™ certificate
- ▶ Remote management of the machine load
- ▶ Machine maintenance schedule assistant

STANDARD PLASMA POWER SUPPLIES

Hypertherm	Max. piercing	Max. from the edge	Kjellberg	Max. piercing	Max. from the edge
Powermax 65	10 mm	32 mm	PA-S45W	20 mm	45 mm
Powermax 85	12 mm	38 mm	HiFocus 80i	12 mm	25 mm

* Given data depends on the material involved and its structure.
The ability to pierce depends on the material, thickness and also height sensor, and drive.
